

# Engage eduROV

## Terminal command

By calling `edurov-web` in the terminal the edurov-web example will be launched. This command also supports multiple flags that can be displayed by running `edurov-web -h`

<code>-r</code>	resolution, use format WIDTHxHEIGHT (default 1024x768)
<code>-fps</code>	framerate for the camera (default 30)
<code>-port</code>	which port the server should serve it's content (default 8000)
<code>-d</code>	set to print debug information

## Example

```
edurov-web -r 640x480 -fps 10
```

Will then set the the video to 640x480 @ 10 fps
